Reducing drug resistance in prostate cancer

National collaboration show in laboratory studies that that co-use of "FAK inhibitor" with

Low-dose doxetaxal does not reduce side effects

Review of men with advanced prostate cancer shows that docetaxel dose reduction is

docetaxel may be a potential strategy to overcome drug resistance. [View abstract](#)

ineffective in reducing febrile neutropaenia and early treatment cessation. [View abstract](#)

Flip in understanding of ING proteins in cancer

Adelaide-developed prostate cancer model used to change the prevailing view of ING3 protein as a tumour suppressor to one of it being a promoter. [View abstract](#)

Fibronectin disruption in prostate cancer

Novel action of 2nd generation AUY922 suggests extracellular matrix cargo delivery as a potential therapeutic target for the treatment of aggressive prostate cancer. [View abstract](#)

Web content & colorectal cancer risk reduction

Optimising personally relevant website content on colorectal cancer risk reduction using frequently asked questions to improve intended outcomes. [View abstract](#)

Financial Review reports on LUTS in men

Financial Review helps to disseminate important information to men about the broader health implications of lower urinary tract symptoms that are often left untreated. [View article](#)

A "referral service" for exercise mobile APPs

Pilot study supports the concept of a referral service for mobile phone based exercise APPs that selects the most suitable APP based on a person's needs. [View abstract](#)

Editorial - Greater focus on healthy obesity

Centre Director argues that rather than the current obsession on weight, priority should be given to optimising health related exposures and behaviours. [View editorial](#)

Testosterone and mortality in men

The relationship between low testosterone in men and mortality risk from multiple chronic diseases is reviewed and the gaps in knowledge highlighted. [View abstract](#)

Global expert panel convene on ARvs

Recommendations of invited panel, including Dr Selth & Prof Tilley, to fast-track translation of androgen receptor variant (ARv) research into advances in care for prostate cancer. [Read more](#)
